

SafeLink addresses the difficulties of working on subdued edge surfaces and other applications where horizontal work and low clearance fall hazards exist.

SAFEWAZE
SAFELINK

Low Clearance Solution
SafeLink HLL System
Featuring **StopLink** with
Tension Indicator

Convenient Setup

Set up SafeLink with ease and complete confidence. Built-in Tension Indicator saves time with a color-coded window to quickly ensure proper force has been applied before use.

Ease of Use

An enhanced manual makes the SafeLink HLL easier to use than ever with detailed clearance requirements calculated from the walking/working surface.

SRL Compatibility

Any Class A or Class B SRL can be used with the SafeLink system. Appropriate Safewaze SRLs include a specialized gauge to easily determine if contact edge meets allowable use parameters.

Low Clearance Solution

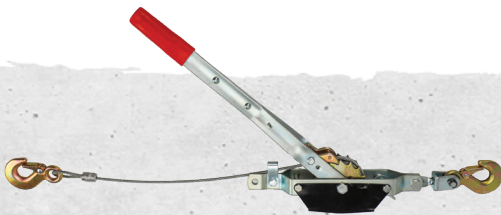

StopLink Brake V2 inline energy absorber drastically reduces force load on anchor and allows for low minimum clearance heights to increase versatility.

Expert Training

Backed by comprehensive installation and use training conducted by Safewaze experts.

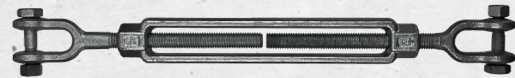

StopLink Brake V2 with Integrated Tension Indicator

65' SafeLink System: Come-A-Long

- 1-Ton cable puller come-a-long
